重画GoogleClusterTrace数据

② 2014-11-17 (2014-11-17 07:52:00) ◎ 128次阅读 ❤ google (/tags/google) cluster (/tags/cluster) trace (/tags/trace) 数据 (/tags/%E6%95%B0%E6%8D%AE)

由于项目计划书写作需要,重画了Qi Zhang, Mohamed Faten Zhani, Raouf Boutaba, Joseph L. Hellerstein,

Dynamic Heterogeneity-Aware Resource Provisioning in the Cloud. IEEE TRANSACTIONS ON CLOUD

COMPUTING, VOL. 2, NO. 1, JANUARY-MARCH 2014.中的TaskEvent分布统计图。原图更跟重画图如下:

原图:

重画图:

数据来源:

介绍:

 $https://code.google.com/p/googleclusterdata/wiki/ClusterData2011_1$

所有文件列表及校验和:

https://commondatastorage.googleapis.com/clusterdata-2011-1/SHA256SUM

格式说明

https://commondatastorage.googleapis.com/clusterdata-2011-1/schema.csv

数据文件示例连接:

https://commondatastorage.googleapis.com/clusterdata-2011-1/job_events/part-00017-of-00500.csv.gz

重画的步骤如下。

1 由于数据存放在https://commondatastorage.googleapis.com/clusterdata-2011-1/

需要FQ才能访问,故所有数据处理都是在墙外的位于东亚的azure服务器完成的。故首先建一个云服务器,并完成环境配置。

(主要是装个python)

2下载数据文件(数据总量较大,1.51G)

```
import urllib2

url = 'https://commondatastorage.googleapis.com/clusterdata-2011-1/'
f = open('C:\\SHA256SUM')
l = f.readlines()
f.close()
for i in l:
    if i.count('task_events')>0:
        fileAddr = i.split()[1][1:]
        fileAmme = fileAddr.split('/')[1]
        print 'downloading', fileName
        data = urllib2.urlopen(url+fileAddr).read()
        print 'saving', fileName
        fileDown = open('C:\\task_events\\'+fileName, 'wb')
        fileDown.write(data)
        fileDown.close()
```

注意:

(1) 执行脚本前要将所有文件列表及校验和文件SHA256SUM

(https://commondatastorage.googleapis.com/clusterdata-2011-1/SHA256SUM)

放到C盘根目录下,它负责生成其他文件的下载链接。

(2) 这里只下载了task_events , 如果要分析其他数据的话 , 参考前文提到的格式说明及介绍修改要下载的文件部分。

3 生成要处理的文件名

```
f = open('C:\\SHA256SUM')
l = f.readlines()
f.close()
fName = open('C:\\task_events_file_name.txt', 'w')
for i in l:
    if i.count('task_events')>0:
        fileAddr = i.split()[1][1:]
        fileName = fileAddr.split('/')[1]
        fName.write(fileName+'\r\n')
fName.close()
```

4 统计

```
import gzip
fName = open('C:\\task_events_file_name.txt')
fileNames = fName.readlines()
fName.close()
cntMapGratis = {}
cntMapProduction = {}
cntMapOthers = {}
#fileNames = ['part-00000-of-00500.csv.gz']
for 1 in fileNames:
    print 'now at: '+ l.strip()
    f = gzip.open('C:\\task_events\\'+1.strip())
    for log in f.readlines():
       log = log.split(',')
if log[9]!='' and log[10]!='':
    index = log[9]+' '+log[10]
            priority = int(log[8])
            if priority <= 1: #Gratis Task
                cntMap = cntMapGratis
            elif priority >= 9 and priority <= 11:
                cntMap = cntMapProduction
                cntMap = cntMapOthers
            if not index in cntMap:
                cntMap[index]=1
            else:
                cntMap[index]+=1
    f.close()
fReasult = open('C:\\CPUandMEMuseGratis.txt', 'w')
for i in cntMapGratis:
    fReasult.write(i+' '+str(cntMapGratis[i])+"\r\n")
fReasult.close()
fReasult = open('C:\\CPUandMEMuseProduction.txt', 'w')
for i in cntMapProduction:
    fReasult.write(i+' '+str(cntMapProduction[i])+"\r\n")
fReasult.close()
fReasult = open('C:\\CPUandMEMuseOthers.txt', 'w')
for i in cntMapOthers:
    fReasult.write(i+' '+str(cntMapOthers[i])+"\r\n")
fReasult.close()
```

5使用matlab绘制

```
clear all
close all
%load('D:\\CPUandMEMuseGratis.txt')
%load('D:\\CPUandMEMuseProduction.txt')
load('D:\\CPUandMEMuseOther.txt')
%CPUandMEMuse = CPUandMEMuseGratis;
```

%CPUandMEMuse = CPUandMEMuseGratis;

%CPUandMEMuse = CPUandMEMuseProduction;

CPUandMEMuse = CPUandMEMuseOther;

x=CPUandMEMuse(:,1);

```
y= CPUandMEMuse(:,2);
s = CPUandMEMuse(:,3)/10000000;
s = log(s);
%max_r = 0.002; %for production and gratis
max_r = 0.001; %for other only
s = s/max(s)*max_r;
for i=1:size(x)
if x(i) == 0 || y(i) == 0
s(i)=0;
end
end
t= 0:pi/10:2*pi;
figure();
grid on
for i=1:size(x)
if x(i) \sim = 0 && y(i) \sim = 0
pb=patch((s(i)*sin(t)*0.5+x(i)),(s(i)*cos(t)+y(i)),b',edgecolor',k');
alpha(pb,.3);
end
end
axis([0 0.5 0 1]);
xlabel('CPU size');
ylabel('Memory size');
set(gca,'FontSize',25);
set(get(gca,'XLabel'),'FontSize',30);
set(get(gca,'YLabel'),'FontSize',30);
% save as (gcf, D: \CPU and MEM use Gratis.jpg')
%saveas(gcf,'D:\\CPUandMEMuseProduction.jpg')
save as (gcf, D: \CPU and MEMD emand Other.jpg')
附注:
1. Task通过优先级划分类别的
0-1 是Gratis
9-11 是Production
其他 ( 2-8 ) 是Other
2. 画图的时候,圆的半径表示数量的对数(log)
